

Dynamic Mapping Software and a number of T-TEC or Thermochron Data loggers you can quickly see how the temperatures change over night or over the week.

Place the data loggers in the area, download them and DyMap will play the changes like a movie

DyMap Dynamic Mapping Software combines thousands of measurements from data loggers into one dynamic graph, where temperature changes can be seen in moving colours. The movie may be seen in chosen time intervals, frame by frame, backwards and forwards. Actual readings may be referred to at any time. 3-D versions can be seen as selected rows and columns.

Ideal for building engineers, HVAC consultants and for air conditioning commissioning. Each project can be saved as a report to present to your clients.

Office buildings, hospitals, greenhouses, cool rooms, vineyards, community halls, theatres...
